

### NEW ICE COMPRESSION WRAP THERAPY

Introducing the latest development in Ice Compression Wrap Therapy.

Flexeze has developed a simple, convenient and unique compression wrap that can insert any ice gel pack into and apply to a body part.

Flexeze has developed this wrap in response to the demand for a lightweight, low cost compression wrap that can be used in the sporting arena, hospital setting or private practice. This enables practitioners to provide safe, effective ice compression therapy for acute injury management.

The advantage Flexeze ice wrap can provide is to allow a patient or player to remain mobile whilst delivering ice compression therapy, without the need to sit or balance the ice gel pack. The wrap is effective on difficult regions of the body to ice such as elbows or low back region. The Ice Compression Wrap provides a cloth barrier to the skin protecting it from the effects of direct ice contact.

The Flexeze Ice Compression Wrap is reusable, light weight and large enough to accommodate most body parts. Now available for use with all ice gel packs of different sizes and shapes.

Flexeze has been in use for years in hospitals and rehabilitation units throughout Australia and overseas and is trusted by Health professionals.

Flexeze is committed to quality development and delivery of acute musculoskeletal pain management. TGA registered and has been clinically proven to be effective in the management and relief of acute low back pain.
